Course Description: This course examines the evolution of international order in East Asia from the perspective of political economy particularly focusing on the transition from the zero-sum geo-political international order to the positive-sum liberal international order since 1945. The course will explain why the main actors of international politics have changed from empires to the nation-states, and why the single generalized global market has been the driving force of peace and prosperity in the world after the end of the Cold War. The course will also investigate whether or not the rise of China will fundamentally change the so-called liberal international order and bring “Techno-Tributary System” back to East Asia.

This course requires heavy reading and weekly assignments. Those who do not have time to fulfil the requirements are advised not to take this course.

Evaluation: Take-home mid-term book review accounts for 30% of the final grade and class participation (in various forms including the final oral exam) accounts for the remaining 70%.
